

Invitation Namer

User guide

Download the zip file from the github repo with following provided link and unzip the folder.

Link: https://github.com/JayathriRanasinghe/Invitation_Namer/archive/refs/tags/invitation_namer.zip

Once you unzip the folder, you will be able to see the required files in this folder.

All you have to do is very simple setup to use this application.

1. add the finalized invitation image to the “final invitations” folder. You can simple rename your file to final_invitation.jpg to go with the default settings.
2. add the invitees name list which is created as excel file to the root folder or just edit the “name_list.xlsx” in the downloaded folder.
3. then run the invitation_namer_UI.exe file and enter the data as you wish and press the create button and simply edited invitations will be saved in the “images folder”.

You may need to change the name printing location. In order to do that you may need to change the height and width accordingly. In case you need to get the name to the center of horizontally and

vertically you may need to do the changes accordingly. Like when you need to get the center horizontally then keep the width field empty.

Extra features:

You can change the font size, font color including font. For changing the font size and the color you have to enter the values in the UI. But for changing the font. You have to download the required font from the google and include that in the “Fonts” folder and provide the file path in the UI as “fonts/arial.ttf”

Defaults settings of the application

Excel file path : name_list.xlsx

invitation path: final_invitations/final_invitation.jpg

height: <center>

width: <center>

Font: Fonts/Demo_ConeriaScript.ttf

Font size: 35

Font color: 255,255,255

when you are entering the font color add with that in the above format. Ex: 0,0,0
